**Description:** Chart MVE has redesigned the latch handle locking mechanism on the Plastic Protective Shipping Container (PPSC) from the metal locking system (Figure 1) to the rubber pull latches (Figure 2). The rubber latch and molded bracket design changes were implemented in order to improve security and ensure the lid remains secure throughout shipment. The PPSC will also have a stainless-steel label plate on the outer shell (Figure 3) in order serve as an area for shipping documents to achieve better adhesion than the plastic shell. Lastly, PPSCs have been rebranded with a color change to Chart “Blue.”
