Heat Conversion & Recovery System Process

Revolutionary Technology

Operational Efficiency

USA-Made Retrofits

Why HRS?

Our Heat Recovery System revolutionizes **utilities and oil and gas sectors** with new and retrofitted solutions through Green Energy capture.

The HRS creates an effective process through the Organic Rankine Cycle (ORC). Heat normally generated and released into the atmosphere is captured through the system's closed loop two phase circuit. The system turns the waste heat into green electricity.

TECO-Westinghouse's proprietary "**High Speed**" Generator drives system performance toward advanced efficiency. Premier turboexpander and compression package technologies, provide our HRS system the ability to propel American energy generation and manufacturing processes, more responsibly and sustainably.
