

Environmental and Sustainability Policy

Chart Industries, Inc. (“Chart”) is a global leading diversified global manufacturer of highly engineered equipment, packaged solutions, and value-add services used throughout the gas to liquid cycle. Sustainability at Chart is about operating our business in a responsible and well considered manner and maximizing return to stockholders while responsibly and sensibly managing the economic, social and environmental risks inherent within our industry.

Chart is committed to environmental stewardship and sustainable business practices. Our dedication to operating as a socially responsible and sustainable company means that we strive to:

- Conduct business according to the highest ethical standards while also operating as a profitable enterprise;
- Adopt standards that build from a foundation of compliance with applicable government laws and regulations, permits, and related agreements;
- Be sensitive to the effects of the Company’s operations on the environment;
- Establish management systems, standards, programs, and procedures within our corporate and operating units for implementation of this policy, and integrate environmental considerations into business planning;
- Inform Chart employees of their responsibility to comply with this policy;
- Make a positive impact on the communities in which we operate;
- Reduce waste and materials consumption in our manufacturing facilities;
- Increase the energy efficiency of our energy-intensive operations;
- Promote the sustainable management of water resources;
- Employ responsibly sourced materials in our products;
- Partner with our customers to design and produce innovative solutions that support sustainable supply chains;
- Contribute to the development and administration of technically and economically sound environmental standards and compliance procedures through interaction with professional and trade groups, legislative bodies, regulatory agencies, and citizens’ organizations; and
- Minimize the total environmental impact of our products.

This policy will be periodically reviewed to ensure that it is effective in driving progress against our sustainability goals and continuous improvement in the sustainability of our business practices across the world.
