Hudson Products Corporation manufactures

- Auto-Variable® fan hubs
- Combin-Aire® water- and air-cooled heat exchangers
- Exact-A-Pitch® digital protractor for setting fan pitch angles
- Fin-Fan® air-cooled heat exchangers
- Solo-Aire® air-cooled heat exchangers
- Hy-Fin® finned tubes
- Tuf-Edge® erosion resistant leading edge protection
- Tuf-Lite® fan blades
- Cofimco fan blades

Hudson, Auto-Variable, Combin-Aire, Exact-A-Pitch, Fin-Fan, Hy-Fin, Solo Aire, Stac-Flo, Tuf-Edge, Tuf-Lite, and Tuf-Lite II are registered trademarks of Hudson Products Corporation.

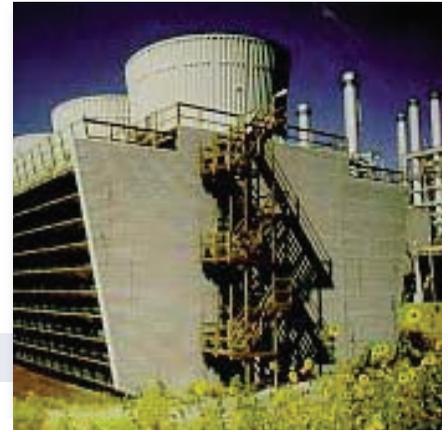

Tuf-Lite[®] FANS

High Performance for Industrial/Utility Applications

A Long Tradition

Hudson Products Corporation is the world leader in axial flow fan technology. We maintain that position through the process of continuous improvement, utilizing sophisticated computer aided blade design and state-of-the-art fan blade manufacturing facilities. Aeronautical design and exhaustive testing at our research center have produced fan blades with unexcelled features and performance.

The Result: HUDSON

Tuf-Lite[®] and *Tuf-Lite II*[®] FANS

Hudson fans are built with uncompromising attention to quality. They are the standard for commercial, industrial and utility applications, offering a combination of performance, strength, endurance, and reliability unmatched by aluminum or competitive plastic blade fans.

We offer customers a choice of materials. Tuf-Lite fans are manufactured from epoxy resins, while Tuf-Lite II fans are manufactured from vinyl ester resins. Both materials provide significantly higher operating temperatures than the competing polyester resins. Tuf-Lite and Tuf-Lite II fans also offer blade configurations specifically designed to optimize air-movement under a variety of conditions.

Features That Set Hudson Fans Apart

Efficiency Tuf-Lite and Tuf-Lite II[®] blades both use the airfoil section that has made Hudson fans renowned for high efficiency and low noise. By varying the chord width and the angle of attack along the length of the blade, these fans yield significantly higher performance than constant-chord-width fans. Increased efficiency provides higher static pressure and air flow capability, and minimizes horsepower requirements.

Included on every fan assembly, Hudson's center air seal also boosts efficiency.

Hudson manufactures fan assemblies to precise tolerances. The installation of these precision assemblies allows minimum tip clearances, further improving fan efficiency.

Safety Light-weight, high strength hollow fiberglass construction provided high energy absorption qualities. These unique characteristics reduce handling problems and ensure increased safety for operating personnel and surrounding equipment.

Lightweight but Tough Fiberglass composite construction of all Tuf-Lite fans provides the advantages of light weight and great fatigue resistance.

Erosion Resistance The leading edge of Tuf-Lite II fans is constructed with a space-age ceramic material. This patented, built-in Tuf-Edge[®] surface prevents erosion caused by the impingement of water droplets and dirt.

Chemical Resistance Formulated toughened resins used for Tuf-Lite blades resist corrosion better than polyester or aluminum materials.

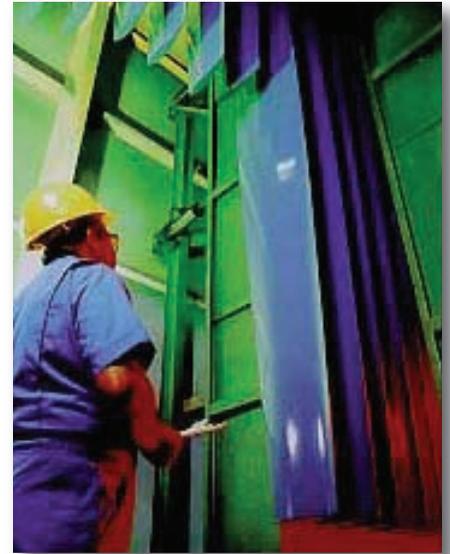

Balance All fan blades are moment-balanced to a master standard, so any single blade can be replaced by a blade of like size and type. Matched sets are not required. Small fan hubs are dynamically balanced, while large hubs are statically balanced for smooth, vibration-free operation.

Ultra-Violet Resistance All Tuf-Lite II blades are protected by a tough, high-solids polyurethane coating that can resist years of sunlight without harmful effects.

Tuf-Lite® Fans and Hudson® Experience — An Optimum Combination Coupled with Hudson's 35 years of experience, Tuf-Lite Fans

- Ensure accurate, dependable, and predictable air-flow delivery.
- Reduce first-cost horsepower requirements and lower operation costs through high efficiency design.
- Provide easy installation and dependable operation.
- Optimize the number of blades for cost-effective applications.
- Incorporate one-piece airfoil construction.
- Offer low-noise operation for sensitive environments.

Availability Hudson's fans and fan components are immediately available from inventory for delivery to any location in the world. Prompt delivery and service are standard operating procedures.

We respond rapidly to emergency situations, shipping parts and components and/or supplying service to any location within hours.

Hudson Fan Hubs — Quality and Strength of Match Tuf-Lite Blades

Simple, Durable Hudson hubs are simple in construction and incorporate durable materials for long life. Designed to accommodate either straight or tapered shafts, hubs are constructed of galvanized steel, ductile or cast iron, and corrosion-resistant aluminum. Fasteners are made of galvanized steel, stainless steel, or monel.

All hubs have tapered bushings with a built-in feature to positively locate the hub on the shaft. Fans smaller than 16 feet in diameter are available with 4 to 8 blades. Larger fans are available with many combinations of blade counts to optimize each air-moving application.

Variable Air Flow Optimum process temperature control, continuous power savings, and, where necessary, freeze protection are provided by either of Hudson's Auto-Variable or Variflo technologies. Auto-Variable hubs control air flow by varying the blade pitch angle, whereas Hudson Variflo technology achieves the same result by varying the fan speed.

Total Quality Hudson's commitment to Total Quality Management assures uncompromised attention to detail in the manufacturing of Tuf-Lite Fans and components. Manufactured in modern facilities by workers dedicated to continuous improvement, Hudson fan blades are highly consistent.

Corrosion/erosion resistance, durability, safety and efficient performance are a few of the characteristics that make Hudson's light-weight, precision balanced fans the worldwide symbol of excellence and superior quality.

Customized Tuf-Lite Fans are available with

- A variety of non-standard finishes and materials for custom applications.
- Metric and non-standard diameters.
- Static pressure capabilities as high as 2 inches of water
- Metric and non-standard hub bores.
